Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

The "special technical features" of claim 1-12,14,15,20-24 relates to "a metal pattern having a metal layer on the substrate by forming a polymer layer in which a polymer having a functional group that interacts with an electroless plating catalyst or a precursor thereof is chemically bonded in a pattern form directly on the substrate", while the "special technical features of claim 13,16-19 relates to "a metal pattern having a metal layer locally formed on a substrate having a particular range of surface roughness and the adhesiveness between the substrate and the metal layer". Therefore, there is no technical relationship among those inventions involving one or more of the same or corresponding technical features.
